

SOUTH AFRICAN MALARIA RISK MAP UPDATED DECEMBER 2018

To significantly reduce your risk, take precautionary measures against mosquito bites throughout the year in ALL RISK areas

Where malaria chemoprophylaxis is indicated, mefloquine or atovaquone-proguanil or doxycycline should be used

Low Risk
Only non-drug measures to prevent mosquito bites are recommended from September to May

Moderate Risk
Antimalarial drugs are recommended from September to May for all travellers

Malaria risk does exist in neighbouring countries For further information, please consult the WHO travel health guidelines at <http://www.who.int/ith/en/>
